## ➔ ReCleanable Development

**Product Evolution** - The Davis ReCleanable Panel Unit is the result of extensive product evolution and development to provide this high quality and resilient Air filter. In 1959 the idea was simple, a panel filter that could be regularly recleaned and re-used rather than just thrown away. A filter that could take the roughest of conditions and still provide efficient filtration year after year. The design became an instant success providing filtration solutions Worldwide.

**Improvement History** - In the 1970's the filter media was developed in order to be flame retardant and self extinguishing while emitting no toxic fumes, further increasing its safety characteristics. For today's market the cellular media has been refined to provide G4 filtration, the industry standard for a pre-filter panel, and yet still retains its resistance to moisture and survival characteristics that extend its life for many years.

**Typical Applications** - These Pleated Panels are available in 2", 3" and 4" deep versions and can be manufactured to any required size. Applications include : Air Handling Units, Fan Inlets, Marine Engines, Cooling System Intakes, Military peacetime filter replacements.
